

NORTHWESTERN TO BUILD ITS RAILROAD INTO IDAHO

Construction of the Chicago & Northwestern from Lander, Wyoming to Idaho Falls, Idaho and thence to the various Idaho and Utah valleys will be started within a short time, according to railroad information, which has been received in Salt Lake. The Northwestern has ordered two camp trains to be sent to Lander at once and a contract has been entered into for the cutting and distribution of ties from Lander along the right of way to Idaho Falls. The camp trains will be under the supervision of the Omaha Boarding & Commissary company, which is the commissary department of the Chicago & Northwestern on the lines west of the Missouri river.

S. M. Braden, general superintendent of the Northwestern lines west

of the Missouri river, has been at Lander for the greater part of two weeks. He has made many trips to the South Pass country and over the right of way, which has been surveyed by the Northwestern engineers. The extension of the Pierre & Rapid City division of the Northwestern into territory west of Lander is a part of the program and a contract has been entered into with a Salt Lake contractor for the delivery of 5,000,000 ties along the right of way of the Pierre & Rapid City division within two years. A large part of the ties, according to the contract are to be delivered along the surveyed right of way to Idaho Falls and into several Idaho valleys. A crosscutting plant for the treating of the ties is being erected.

The surveys which have been made

by the Northwestern engineers strike south of Lander and pass through W. ope and thence through South Pass the only break in the mountain chain for a good many miles in either a northerly or southerly direction. The construction of the line from Lander to Idaho Falls is to be under the supervision of William Spencer, superintendent of the Black Hills division of the Northwestern line.

Railroad men not connected with either the Union Pacific system or the Chicago & Northwestern say they have advice from east that in the event the Northwestern is completed into territory west of Idaho Falls, a line will be run into Salt Lake for the purpose of connecting up with an outlet to the Pacific coast by way of the Salt Lake Route and the Western Pacific.—Montana Examiner.

HARD FOR TITLE FIGHT
WITH CHAMPION RITCHIE.

Tommy Murphy is training hard for his fight with Willie Ritchie. Murphy will try conclusions with the fast little lightweight champion in San Francisco on April 17, provided there are no postponements.

NEVADA POSTMASTER KILLED BY ASSASSIN

Thomas Jones Of Lida Is Shot To Death By An Unidentified Man

Goldfield, Nevada, March 23.—Thomas Jones, for ten years justice of the peace and postmaster at Lida, a small mining camp thirty-five miles southwest of Goldfield, was shot by an unknown assassin last evening and died a few hours later. About seven o'clock Jones went from his house to the woodpile for wood, when his assailant arose from behind the pile and fired with a shotgun the charge of buckshot entering Jones' shoulder. A second charge, apparently birdshot knocked Jones' hat and caused several scalp wounds. Several of the heavy shot passed through Jones' body and a brass suspender buckle was driven into his lungs.

Deputy sheriffs and a doctor were summoned by telephone and hastened to the scene by automobile. Jones remained conscious until his death at midnight, but was unable to describe his assailant, or furnish any clue.

There have been several shooting affrays at Lida in late years. Jones is said to have aided in the prosecution of trespassers on national forest reserves, but before dying declared that he had no enemies. He was widely known in southern Nevada and among former Alaskans.

PLAIN TRUTH THAT
IS WORTH MONEY

Using Foley's Honey and Tar for a cough or cold may save you both sickness and money. F. F. Monahan, Menomonee, Wisconsin, says: I am exposed to all kinds of weather and I find Foley's Honey and Tar Compound always fires me up in good shape when I catch cold or have a bad cough. I recommend it gladly. Refuse substitutes. Co-op Drug Co.—Advertisement.

Camels in Queensland.
Over a thousand camels are used in Queensland as a means of transport across the arid districts, and the number is rapidly increasing.

Making A Spring Jacket

The loosely hanging, almost unfitted jackets we wear today hardly need the tailor's skill though they may benefit by some of his art, and the greater part of that art is devoted to the making of a shapely garment. To do this it is necessary that there be always some smooth foundation, and it is for this reason that canvas is introduced in the fronts and around the arm holes and the ends of the shoulder seams supported by several layers of cotton wadding. The canvas is soft, not stiff and the cotton wadding can scarcely be called padding, but both are essential to a rightly made jacket or coat.

Lay the pattern on the cloth, carefully observing the way of the goods, as well as of the perforations that

indicate the straight lengthwise line.

Cut the various pieces of the pattern, being sure to cut all the notches in seam edges and before removing the pattern, mark on the cloth with chalk the perforations that relate to the construction. Follow the directions that have been given in a previous lesson for marking these lines on the cloth, first with chalk then by making tailors' tacks thru the two layers of cloth and separating them by clipping the threads. Baste the dart in each front, then the under arm and shoulder seams. Do not cut the darts; simply bring the lines of tailors' tacks together and baste the seam along this sewing line. Before we fit the jacket we will baste the canvas in place.

DAIRY THE DAIRY

PRODUCE FINE MILK FLAVOR

Experiments Conducted at Government Dairy Farm in Maryland Favor Feeding Bran and Corn.

It has been asserted by some dairymen that the feeding of crushed oats to cows will improve the flavor of milk. To ascertain the correctness of this theory a series of experiments was made by the bureau of animal industry of the United States department of agriculture at the experimental dairy farm at Beltsville, Md. Six cows were used in the experiment; three were fed a grain ration of corn meal, bran, and cotton-seed meal; the other three were fed a grain mixture of five parts crushed oats and one part cotton-seed meal. A number of samples of milk from the cows fed these rations were submitted to various persons in the dairy division and they were asked to indicate their preference. In all 50 opinions were passed on various samples. Of these, 16 showed a preference for the milk from cows fed on crushed oats, 25 preferred that from the bran and corn ration, while nine expressed no choice. The results show that in these rations, not only was there no marked difference in favor of the crushed oats as a feed to improve flavor, but, if anything, the ration containing bran and corn was more successful in producing a fine-flavored milk.

FALL DROPPED CALVES BEST

Coming at a Time When Little Attention Required Can Be Given They Progress From Start.

Where cattle are reared under natural conditions, the rule that the young be dropped in the spring will continue, but this practice is not necessarily the most successful in the older sections of the country. Fall dropped calves come at a time when the little attentions they need can easily be given, and they occupy but little space in barn or shed, writes J. R. Jacobson of New York in Hoard's Dairyman. Subsisting on the mother's milk or on skimmed milk with a little grain and hay, when spring comes the youngsters are large enough to make good use of the pasture. The result is progress from the start until fall, when they return to the barn or shed large enough and strong enough in digestion to make good use of the dry provender necessitated by winter conditions.

IMPROVE THE DAIRY CATTLE

Best Plan for Dairymen is to Replace Common Cows With Their Daughters by Pure-Bred Sires.

The best way for the dairymen to improve his herd is to replace his common cows with their daughters by pure-bred sires from advanced registry dams.

The high prices for some of the best dairy animals need not discourage dairymen from improving their herds by the introduction of good

blood, for the obstacle can be overcome by neighborhood co-operation in buying new sires.

In all localities where dairymen is a well-established industry there is no reason why the best bred dairy bulls should not be available to the small dairymen. What would be the big price for one man to pay for a registered sire could be made a very small investment by joint purchasing.

Maintaining Fertility.

The man that keeps his share of dairy cows and manages them in the right manner will never find his land losing its fertility. As a means of keeping up the fertility of the soil, the dairy business cannot be beaten. Only a small amount of the elements are taken away from the soil without being returned, and that small amount is very profitable.

Uses for Cement.

Cement is taking the place of other materials for floors and for different forms of farm construction. It has many uses. It is going to be much more popular this year, but it is doubtful if it will ever supplement lumber entirely.

Importance of Regularity.

It is of great importance that strict regularity should be observed, both in feeding and in milking, in order to secure the greatest degree of contentment in the herd.

NOTES from MEADOWBROOK FARM

In hot weather or in drawing heavy loads, watch your horse's breathing. If he breathes hard, or short and quick, it is time to stop.

The implement dealer's best friend is the farmer who houses his farm machines at the side of a barbed wire fence or under the shade of a leafless tree.

Butter or cream may be hauled to market at less expense than any other farm crop. And you are selling less fertility of the farm than with any other crop.

Remember that vigor and good digestion are more necessary to egg production than the exact color of the feathers, though it is possible to have both in the same bird.

Because of the fact that the weather is cold, do not neglect giving the hens all the fresh water they can drink. It should be slightly warmed to keep it from freezing up at once.

Forcing a cow for a short period cannot always be accepted as the legitimate measure of her capacity of any breed, no matter how well authenticated any great performance may be.

The most profitable method of starting tomato plants is to sow the seeds in dirt bands in the hotbed, and shift the plants to the field at setting time with the dirt band and soil intact.

It takes about the same amount of dry matter to make a pound of butter as a pound of beef. Beef may sell for \$5.50 per hundred and butter for \$20. The latter leaves more fertility on the farm.

JAUNTY TAILLEUR
FOR WEAR IN THE
EARLY SPRINGTIME.

This smart and youthful tailor is built of red rutine and is worn with a white collar and a loosely fitting white vest. The simple trimming of white pearl buttons is extremely effective. The suitable little chapeau is of black tagal covered with moire.

LOCAL DRUGGIST
MAKES MANY FRIENDS

The City Drug Company reports that they are making many friends through the QUICK benefit which Logan people receive from the simple mixture of buckthorn bark, glycerine etc., known as Adler-Lka. This remedy became famous by curing appen-

END STOMACH TROUBLE, GASES OR DYSPEPSIA

"Pape's Diapasein" makes Sick, Sour, Gassy Stomachs surely feel fine in five minutes.

If what you just ate is souring on your stomach or lies like a lump of lead, refusing to digest, or you belch gas and eructate sour, undigested food, or have a feeling of dizziness, heartburn, fullness, nausea, bad taste in mouth and stomach-headache, you can get blessed relief in five minutes. Put an end to stomach trouble forever by getting a large fifty-cent case of Pape's Diapasein from any drug store. You realize in five minutes how needless it is to suffer from indigestion, dyspepsia or any stomach disorder. It's the quickest, surest stomach doctor in the world. It's wonderful.

CUP CHALLENGES

TO BE LAUNCHED

Boston, March 22.—Reports from the New England ship yards that are building the three aspirants for the defense of the America's cup against the fourth Lipton invasion next fall, show the Bristol yacht to be 75 per cent, the Bath yacht 50 per cent and the Neponset yacht, 33 per cent completed. The launching of the Bristol boat, under construction for six present and former flag officers of the New York Yacht club has been fixed for the week of April 12 and will probably be on April 17. The Defiance which a syndicate of Boston, New York and Philadelphia yachtmen is building at Bath, is expected to go overboard during the week of May 10, with May 12 as a tentative date. Although it was announced recently that the yacht building at Neponset for A. S. Cochran of New York would probably be launched about April 25 it is now thought that this boat will be the last of the trio to go into the water.
